                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                $31.20 115 18 11 Dengih 198.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PROTEIN                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ouer: Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           12

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FOURTH PROBLEM IN THE STATE OF 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         111
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        THE BOARD STATES AND STATES AND THE SECOND STATES OF THE SECOND S                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MARCH

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    801.18 Agonist antibodies which activate specific protein tyrosine kinase(s) - also activate chimeric proteins of kinase extracellular domain and ig constant domain, useful for studying, and therapectic modulation of, cell growth and ifferentiation bisclosure, Page 56-58; 125pp; English.

DNA probes based on protein tyrosine-kinase (pTK) sequences were used to screen cDNA libraries to identify movel [PTK] general Residence of the interpretation of megakarycoptic cell libraries. The encoded novel pTK, LpTK2 (R855029), shows homology to known pTKs, and can be used to design drugs that modulate pTK.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  we protein tyrosine kinase genes and proteins encoded by once are of human mega-karyocytic origin (laim 3; Fd 5; 60pp; English origin (laim 3; Fd 5; 60pp; English origin oligonucleotide primers: a first set which amplifies all pTK DNA segments (04974-44), and a second set which amplifies highly conserved sequences present in the catalytic domain of the risit in 049747-57 and R41897-02.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      liqiyavotledbiyiitelmrhqsiqeylqndtyskihlitqqrdmaqqqasqqmaylesr 348

Arg is expressed as two transcripts by analogy with clab, the alternative status sequences lare from designated A and B (014937) and it is assumed that they are is not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      to the arg second exon.
The amino acid sequence is represented as found in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120 NYJHRDERAANIEVGDNEVCKIADFGLAREJEDNEYTARGJAKEFJKKTALEAATT

 Amutant IR is claimed which may have a mutated alpha-chain, esp. at the mutant IR is claimed which may have a mutated alpha-chain, esp. at the precursor processing size. The beta-chain may be mintated, e.g. by deletion of the transferences of the transferences with may be inactificated. Fig. 5 is a comparison of project and human EGE receptor sequences with that of HIR in the cytoplasmic sequence. 254 Am.

Disclosure, Fig 5D; 40pp; English.

The human gene encoding this protein is closely related to but distinct from the abl proteince and is a member of the tyrosine tinner from the abl proteince and is a member of the tyrosine by analogy with crabl, the alternative 5' arg sequences have been designated A (1014985) and B and it is assumed that they are joined the the arg second exon.

The amino acid sequence is represented as found in the specifical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                362 uwajgulmweiftogkmpigrlknteurerrargillekpkenokoludumklowshape 420 (1991) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (1911) (19

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Cytoplasmic tyrosine kinase BMX and related DNA - useful to stimulate haematopoietic cell growth.

Stimulate and 28-29. dopp. English.

The amine acid sequence (P945:8) of Proceedilla sto280 tyrosine kinase was compared with the sequences of 2 members of a respect tyrosine kinase family. PHY (R945:4) if (F445:5) and TEC (F445:5), and and decided and teceptain forms of the compared with novel homen cytoplasmic tyrosine kinase BMX (see also P9453). Close hemology was found.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    66 AVVSEE-PIYIVTEFMTKGSLLDFLKEGEGKFL-KLFÇLVDKAAÇIADOMAYILKANYIL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              124 RELEAANILVGENIVGKIADFGLAFLIEFNRFYTAPOGAKFPIFWIAPFAALYGRETIKSE

Willias K.

Willias C. Frack/2],

Willias C. Bornardon Kinasc BMX and related DNA - useful to be simple tyrosine kinasc Followshi.

You have the following the finasc FD (5945%) is expressed in mixing a newly identified non-receptor tyrosine of THO and 2 other neutors of a newly identified non-receptor tyrosine kinasc found. Tr (845%) is expressed in mixing a newly fidentified non-receptor tyrosine vinasc found.

Will bik (845%), when compared Will that of newel cytopassine tyrosine kinasc found.

Cytoplasmic tyrosine kinase BTK (R94534) is setter integrated tyrosine kinase BTK (R94534)...
The surrented rytosine kinase BTK (R94534) is setter integrated tyrosine kinase and 2 orber members of a newly-identified non-receptor tyrosine kinase tamily. ITK (R94535) and TEC (R94534), and of the bracephila Sto28C tyrosine kinase (R94534), worn compared with that of nevel cytoplasmic tyrosine kinase HMX (see also K44544).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The New Jordon Annae BMX and related DNA - useful to stimulate haematopoietic cell growth.

The Cytopiasmic tyrosine kinase BMX (P9453) is capable to stimulate haematopoietic cell growth.

Stimulating growth and/or proliferation of haematopulotic relation growth and/or proliferation of haematopulotic relation to the product of a cDNA clone isolated from a human time to the latest product of a cDNA clone isolated from a human time to the latest of a cDNA clone isolated from a human time to the latest for call transfer for call transfer kinase (R94538). It is useful as a marker for call transfer kinase (R94538). It is useful as a marker for call formation and differentiation and for various types of tumour formation and in the diagnosis and treatment of diseases resulting from deregulated tyrosine phosphorylation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ihrdlaarnolvdrdlovkvsdfgmtryvlddgymssmotkfpwkwsapomfhyfkyssk 🖺
